(1 of 14)

Common names: California honeysuckle [[Hrusa 2001](#), [U.S. Forest Service 1997](#)], hairy honeysuckle [[Hrusa 2001](#)], pink honeysuckle [[PLANTS 2001](#)]

Plant communities: Mixed Evergreen Forest, Redwood Forest, Douglas-Fir Forest, Foothill Woodland [[Lum/Walker](#), [CNPS](#)]

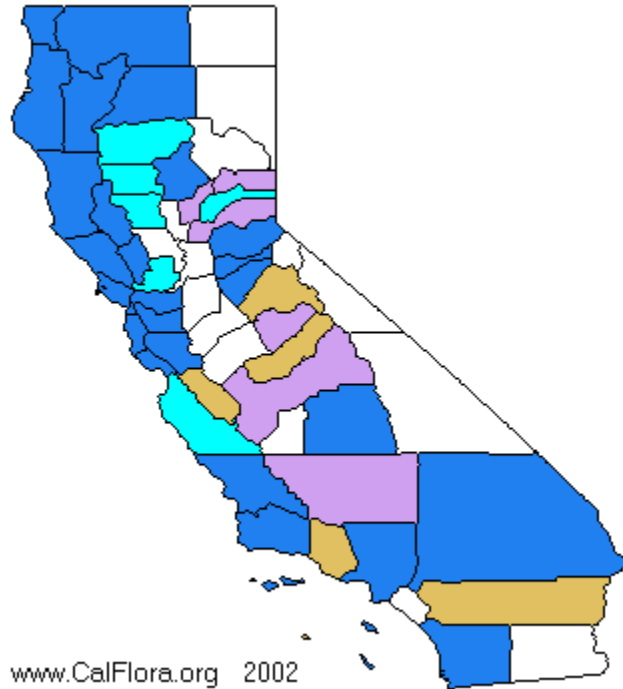

Habitat: described by Walker and/or CNPS as occurring in streambank and slope habitats [[Walker](#) and/or [CNPS Inventory 1994](#)]

Wetlands: usually occurs in non wetlands, but occasionally found on wetlands [[U.S. Fish & Wildlife Svc.](#)]

Elevation: between 0 and 2500 feet [[Lum/Walker](#)].

Lonicera hispidula var. vacillans, a dicot in the family Caprifoliaceae, is a vine or shrub that is **native** to California [[Hrusa](#)] and is also found outside of California, but is confined to western North America [[Lum/Walker](#)].

Distribution in California based on 622 Observations contributed to the CalFlora Occurrence Library

Shaded counties indicate at least one observation within the county.

Blue indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

Light Blue indicates a documented observation that is vouchered or confirmed by an expert.

Lavender indicates other reported observations that are unvouchered.

Mustard Yellow indicates the county falls within the described species range published in botanical literature
