

***Quercus chrysolepis* Liebm. (Fagaceae)**

Brother Alfred Brousseau
© 1995 Saint Mary's College of California
(1 of 26)

Common names: Canyon Oak, Maul Oak, Goldcup Oak [[Hrusa 2001](#)], Goldcup Live Oak [[Hrusa 2001](#)], canyon live oak [[PLANTS 2001](#), [Hrusa 2001](#)], goldcup oak [[Hrusa 2001](#)]

Plant communities: Yellow Pine Forest, Red Fir Forest, Lodgepole Forest, Foothill Woodland, Chaparral, Valley Grassland, many plant communities [[Lum/Walker](#), [CNPS](#)]

Habitat: described by Walker and/or CNPS as occurring under moist conditions in canyon and slope habitats [[Walker](#) and/or [CNPS Inventory 1994](#)]

Elevation: between 0 and 6500 feet [[Lum/Walker](#)].

Quercus chrysolepis, a dicot in the family Fagaceae, is a tree that is **native** to California [[Hrusa](#)] and is also found outside of California, but is confined to western North America [[Lum/Walker](#)].

Distribution in California based on 5341 Observations contributed to the CalFlora Occurrence Library

Shaded counties indicate at least one observation within the county.

Blue indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

Light Blue indicates a documented observation that is vouchered or confirmed by an expert.

Lavender indicates other reported observations that are unvouchered.

Mustard Yellow indicates the county falls within the described species range published in botanical literature
