Elevation: between 0 and 7000 feet [[Lum/Walker](#)].

Quercus kelloggii, a dicot in the family Fagaceae, is a tree that is **native** to California [[Hrusa](#)] and is also found outside of California, but is confined to western North America [[Lum/Walker](#)].

Distribution in California based on 5617 Observations contributed to the CalFlora Occurrence Library

Shaded counties indicate at least one observation within the county.

Blue indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

Light Blue indicates a documented observation that is vouchered or confirmed by an expert.

Lavender indicates other reported observations that are unvouchered.

Mustard Yellow indicates the county falls within the described species range published in botanical literature
