(1 of 29)

Common names: coast redwood [[Hrusa 2001](#)], redwood [[PLANTS 2001](#)]

Plant community: Redwood Forest [[Lum/Walker](#)]

Elevation: between 0 and 3608 feet [[Hickman 1993](#)].

Sequoia sempervirens, a gymnosperm in the family Taxodiaceae, is a tree that is **native** to California [[Hrusa](#)] and is found only slightly beyond California borders [[Lum/Walker](#)].

**Distribution in California based on 1217 Observations
contributed to the CalFlora Occurrence Library**

Shaded counties indicate at least one observation within the county.

Blue indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

Light Blue indicates a documented observation that is vouchered or confirmed by an expert.

Lavender indicates other reported observations that are unvouchered.

Mustard Yellow indicates the county falls within the described species range published in botanical literature
