(1 of 18)

**Common names:** Star-flower [[Hrusa 2001](#)], Western star flower [[Hrusa 2001](#)], woodland star [[Hrusa 2001](#)]

**Plant communities:** Mixed Evergreen Forest, Redwood Forest, Yellow Pine Forest [[Lum/Walker](#), [CNPS](#)]

**Wetlands:** equally likely to occur in wetlands or non wetlands [[U.S. Fish & Wildlife Svc.](#)]

**Elevation:** between 0 and 4500 feet [ [Lum/Walker](#)].

***Trientalis latifolia***, a dicot in the family Primulaceae, is a perennial herb that is **native** to California [[Hrusa](#)] and is also found outside of California, but is confined to western North America [[Lum/Walker](#)].

## Distribution in California based on 1479 Observations contributed to the CalFlora Occurrence Library

**Shaded counties indicate at least one observation within the county.**

**Blue** indicates that there is a specimen from this county in a participating herbarium. Specimens have the highest reliability of identification.

**Light Blue** indicates a documented observation that is vouchered or confirmed by an expert.

**Lavender** indicates other reported observations that are unvouchered.

**Mustard Yellow** indicates the county falls within the described species range published in botanical literature
