

P. ramorum symptoms on viburnum

Viburnum x bodnantense 'Dawn'

Photo: Oregon Dept. of Agriculture

Several species of viburnum are hosts for *Phytophthora ramorum*. Symptoms include shoot dieback, leaf blight, and stem canker.

Severe disease results in wilting of the leaves and/or defoliation. This can be hard to see if plants are crowded together, like these plants in a nursery.

P. ramorum symptoms on viburnum

Viburnum plicatum tomentosum 'Mariesii'

Photo: Jennifer Parke, Oregon State University

Brown, 'watersoaked' leaf spots indicate initial symptoms of ramorum foliar blight on this viburnum.
