NATIVE PLANTS ASSOCIATED WITH SUDDEN OAK DEATH (SOD) AND THEIR USE BY CALIFORNIA INDIANS – FACT SHEET No. 16

The plant disease caused by a fungus-like microorganism, Phytophthora ramorum, is referred to as "Sudden Oak Death" because of its association with premature death in tanoak trees. This disease occurs in Northern California wildlands and affects several native California plants, including Wood Rose. Susceptible plants can become infected through exposure to water borne infective agents via rainfall, splash or drainage. In addition to natural spread of the disease, it can also be transmitted by human transport of infected plants and their parts to susceptible new plants in the environment. Good cultural practices and restrictions on the movement of infected material can minimize the risk of spreading the disease. For more information, please refer to website links for the U.S. Department Of Agriculture/Plant Protection And Quarantine (www.aphis.usda.gov/ppq/ispm/pramorum/), the California Department Of Food And Agriculture (www.aphis.usda.gov/ppq/ispm/pramorum/), the California Department Of Food And Agriculture (www.aphis.usda.gov/ppq/ispm/pramorum/), the California Department Of Food And Agriculture (www.aphis.usda.gov/ppq/ispm/pramorum/), or contact your local County Department Of Agriculture.

Common Name: Wood or Dwarf Rose Scientific Name: Rosa gymnocarpa

© 2005 Russell Towle

Karuk Name: axnatsinvanáhiich (wild rose), axnatsinvanahíchkaam (rose sp.)

Kashava Pomo Name: badú?den?

Paiute Name: moogootseabooe (rose bush)

Yokia Name: käl' ē Past and possibly present tribal uses.

Ohlone: Wild rose hip tea was used to cure colds.

Pomo: Fresh fruit (hip) used for food.
